

Cleaner. Safer. **Smarter**

Fuel Tank Isolation Valve **FTIV**

As hybridization bridges the path to full electrification, hybrid vehicles require an ECU-controlled FTIV to manage fuel tank pressure safely and efficiently.

The FTIV maintains optimal pressure during driving and ensures controlled venting during refueling, supporting emissions reduction and system integrity.

RAVAL's controlled FTIVs are tailor-made to meet each customer's specific performance and packaging requirements.

All FTIVs can be seamlessly integrated with RAVAL's advanced multi-sensing edge technology for enhanced control, diagnostics and system intelligence.
